In today's digital landscape, password management is crucial. Our solution automates, simplifies, and secures your password management and compliance processes across various platforms and devices, ensuring your organization is protected from unauthorized access, breaches, and cyberattacks.

## Key Features

### Password Inventory and Security Assessment

- Scans your network and identifies weak or compromised passwords using advanced techniques including brute-force, AI, & password leaks.
- Provides compliance reports for immediate remediation.

### Password Policy Enforcement

- Enforces robust password policies across all systems.
- Blocks compromised passwords and ensures resilience against AI attacks.

### Password Duplicate Detection

- Detects and mitigates password reuse risks across systems and applications.

### Password Auditing and Reporting

- Tracks all password activities and generates detailed reports, highlighting any security or compliance issues.

# Security & Compliance

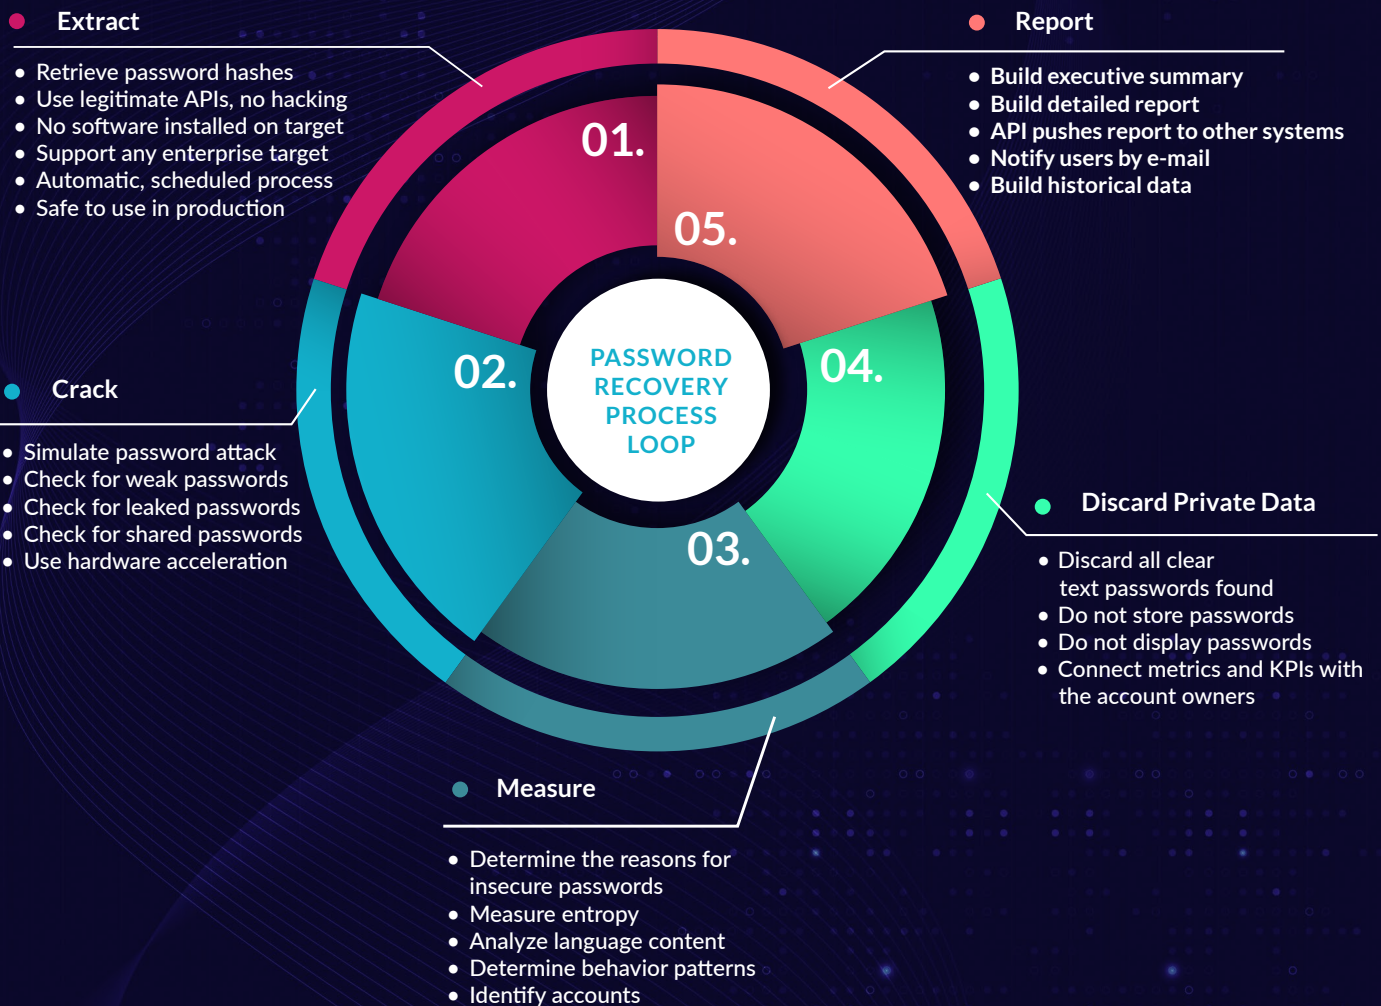

Passwords are a primary target for cyberattacks.

Weak or compromised passwords expose your organization to breaches and regulatory penalties.

## Enterprise Password Audit Solution (EPAS)

Our solution is designed to secure your organization's digital assets by detecting and preventing insecure passwords before they can be exploited. It addresses the critical need for password security, ensuring your organization meets regulatory requirements with minimal effort.

- **Detect & Prevent:** Identifies weak, predictable, or compromised passwords, and prevents their use.
- **Privacy-Compliant:** No clear text storage; fully compliant with privacy standards.
- **Largest Credential Database:** Leverages a vast repository to identify compromised passwords.
- **Attack Prevention:** Protects against all known attack methods, including AI-driven attacks.
- **Isolated & Secure:** Operates in a fully isolated environment, ensuring no external access.
- **Scalable & Integrative:** Scales across environments with seamless SOC integration.
- **Automated Compliance:** Regular, automated password assessments to maintain security without manual effort.
