Data Governance & Identification Assessment

We collate potential data stores and prepare clients to manage data and costs in the early stages of disputes and investigations. We prepare clients to comply with early disclosure requirements imposed by the Courts.

Forensic Collection and Preservation

We preserve and collect data from various sources and systems in a secure, precise, and effective manner. We document the collection procedure so that collection records and the source data are available when needed.

Managed Document Review & Production

We project manage engagements to ensure evidence review is efficient and complete. We advise on strategies to leverage AI and analytics and monitor progress through to production of documents according to set deadlines.

eDiscovery Planning and Evidence Processing

We plan activities to ensure significant information such as case actors, date ranges, and privilege determinations are prioritised. We assist to cull irrelevant data, and deal with duplicates to reduce costs and accelerate downstream review.

Investigation Support

We provide investigative support services to help clients respond to critical investigation requirements. This includes determination of chronologies from email, chats, and online interactions; discovery of latent patterns and networks of communications synchronised around key events.

Data Breach Rapid Response

We help organisations respond to regulatory requests in a timely manner. We scale the data processing and review activities to suit cost management priorities and delivery timing needs for each case.
